Use ROBUST, get a 2nd worker for free

Ergonomics and profitability are not mutually exclusive. That has been clear since PFERDVALUE detailed the added value of using these tools. However, the fact that a new grinding disc can also be a solution to the skills shortage is something new.

So aggressive and ergonomic that the production capacity doubles – CC-GRIND-ROBUST by PFERD

"The challenges for the manufacturing industry are not getting any easier", asserts PFERD Product Manager Marco Steinwand. "Alongside the massive rise in costs, the skills shortage is causing difficulties for many companies." The order books are largely filled up but there is a lack of personnel to carry out the work.

"At PFERD we believe that when it gets hard to find new and qualified personnel, the right choice of tools can compensate for an employee." It's simply about using only the best, fastest and most ergonomic products, "because then our customers can help their employees to complete their work duties faster and therefore stay happy and healthy", the Product Manager promises.

According to Steinwand, one of the tools that is currently proving to be the problem solver for many PFERD customers is the new CC-GRIND-ROBUST, a grinding disc which could largely replace roughing, flap or fibre discs: "The CC-GRIND-ROBUST offers all the advantages that we know the CC-GRIND family for: The tools are light, quiet, generate little dust, are very easy to use and, above all, super-fast."

Even the SG version of the CC-GRIND-ROBUST achieves approximately twice the stock removal in the same time unit compared with a normal reinforced grinding wheel. "In purely mathematical terms, that already doubles production capacity in this process step", stresses Steinwand.

The CC-GRIND-ROBUST SGP version doubles the performance once again, thanks to VICTOGRAIN high-performance abrasive grain. "This leads to major savings in terms of the staff required thanks to significantly reduced grinding times. Our customers gain time and production capacities – important advantages when dealing with limited manpower."

PFERD is currently experiencing a high demand for tools like this, explains the PFERD Product Manager, "which reinforces our approach of always looking for the best and most efficient solutions for the user."

CC-GRIND-ROBUST comes in two different versions with two diameters each. Suitable for steel and stainless steel (INOX) machining and offering high grinding performance and maximum tool life, the CC-GRIND-ROBUST SG STEELOX already offers numerous advantages over the conventional roughing and grinding discs. "It is very good for surface work but also ideal for use on edges, deburring for example", says Steinwand. The CC-GRIND-ROBUST SGP STEELOX version is characterized by its precision formed, triangular, high-performance abrasive grain VICTOGRAIN, which is equally suited to use on steel or stainless steel (INOX). "We have VICTOGRAIN to thank here for the highest grinding performance and outstanding tool life." This version is especially recommended for surface work and for achieving the fastest possible work progress.

"The fibreglass-reinforced plastic backer guarantees equally robust and safe use", adds Marco Steinwand. "Due to the high dimensional stability high quality can also be achieved on flat surfaces, unlike with flap discs."

"At PFERD we are glad that, with the CC-GRIND-ROBUST, we can offer a tool that customers are actually looking for and need and that, thanks to its properties, suits the times we currently find ourselves in. For many, it is simply a real problem solver when it comes to reducing working times and thereby increasing productivity."
